

GARDENSOXX GUIDE

STEP 1

Cut a small hole in the GardenSoxx mesh, approximately the size of the plug or root mass of the plant. Slice with a knife, or pinch and cut with scissors.

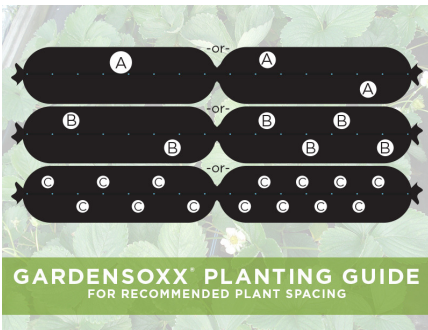

STEP 2

Make a hole in the growing media deep enough for your plant. Follow recommended planting depths for plants and seeds.

STEP 3

Place the plug or seeds into the hole and cover the plug or roots completely. Lightly pat the growing media around the plant.

A - Large Plants

*1-2 plants per 2' of
GardenSoxx*

Examples: Broccoli, cauliflower,
cabbage, squash, zucchini,
gourds, melon

B - Medium Plants

*2-4 plants per 2' of
GardenSoxx*

Examples: tomatoes, peppers,
okra, eggplant, spinach, swiss
chard

C - Small Plants

*6-8 plants per 2' of
GardenSoxx*

Examples: beans, lettuce,
flowers, herbs, leeks, peas,
strawberries

PLANTING TIPS:

- Cut holes about 2-3 inches wide. The hole will expand allowing plenty of space for seeds or plugs to grow.
- The mesh will not unravel if the hole rips or tears.
- Typically water GardenSoxx thoroughly before planting, and immediately afterwards.
- Make a small indentation or groove across the top of the GardenSoxx to help the water reach your plants.
